

BALLOON SINUPLASTY

For Chronic Sinusitis Sufferers

Do you have recurring sinus pain and pressure? Do you want relief from painful, chronic sinus syndrome? If yes, we have the answer with the revolutionary balloon sinuplasty technology available at Alvarado Hospital. Balloon sinuplasty gently restructures and opens narrow sinus passageways, restoring normal drainage and function during a simple outpatient procedure.

Sinusitis is one of the most common chronic health problems in the United States—afflicting more than 37 million Americans each year. Sinusitis can significantly impact physical, functional and emotional quality of life. The balloon sinuplasty technology has been shown to be safe and effective in relieving chronic sinusitis symptoms.

Because the procedure is a minimally invasive outpatient procedure, many patients experience reduced bleeding and quicker recovery time. There is usually little discomfort during or after treatment. Although recovery times vary, many people return to normal activities within 24 hours.

To find an Alvarado Hospital ear, nose and throat physician who specializes in this procedure, call (800) ALVARADO (800-258-2723) or visit our website
